AMERLUX UNVEILS NEW PUCK MULTIPLE

FAIRFIELD, N.J., July 1, 2009 – Proving that presentation – a well-lit presentation – is everything, Amerlux Lighting Solutions introduces its new Puck Multiple Remodeler, a recessed multiple LED lamp ideally suited for accent and display needs in retail, hospitality and commercial environments.

“With the new Puck Multiple, Amerlux continues to demonstrate its leadership in superior lighting solutions with an eye toward efficiency, conservation and outstanding presentation,” noted Amerlux President and CEO Chuck Campagna. “The Puck Multiple offers a stylish option in the accent and display lighting category that dramatically reduces heat output and energy consumption and makes it an ideal solution for the commercial, hospitality and retail marketplaces.”

Designed as a recessed ceiling fixture, at only 3” wide and 2.5” deep the Puck Multiple boasts as few as one and as many as four machined aluminum LED adjustable head options within a stamped aluminum faceplate in either White Textured or Satin Aluminum color. Custom colors are available upon request. The Puck Multiple efficiently provides warm white LEDs in a range of 2740K to 3040K CCT with a CRI of 85 in an array of beam options.
